Male mice of ICR strain were exposed to about 5% n-pentane for one hour while the oxygen environmental air was maintained at about 20%. Then their blood and liver tissue were collected and analyzed by means of GC and GC-MS. The metabolites thus obtained were 2-pentanol, 3-pentanol and 2-pentanone. The same procedure was repeated with isopentane; 3-methyl-2-butanol, 2-methyl-2-butanol and ...

3. A certain species of plant in the Australian outback has created an interesting defense with signal transduction pathways. When herbivores feed on it, it releases a gas into the air. The gas reaches neighboring plants, stimulating receptors which cause the cells of those plants to produce toxins.

In evolutionary biology, abiogenesis, or informally the origin of life (OoL), is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but an evolutionary process of ...
